

Custom Reinforced Tube

New Extruded Tube Design

Advantages:

- Additional horizontal wall inside tube to provide more structural support and rigidity
- Custom grip lines on top of tube for improved traction when standing
- Inset groove in tube to hide wires and brake lines
- Custom lower lip on inside edge of tube designed for improved welds and extra cross member support
- Custom T-channel used to secure undercarriage components allowing for ease of adjustability for axles and fenders
- Custom fit to match exact hull specifications; over 500 customized hull fixtures available at our production facility.
